

## GMA Secures AWS Workloads with Trellix Integrated Threat Intelligence

### Industry

Information Technology

### Size

Small Business

### Country Myanmar

### Company Overview

Golden Myanmar Apex (GMA Technology Oriented Company) is a technology company that operates in an environment requiring robust cybersecurity measures across multiple attack vectors. The organization sought comprehensive security solutions that could protect both network and endpoint infrastructure while providing advanced threat intelligence capabilities. Their security requirements demanded flexibility in deployment options to accommodate existing infrastructure constraints.

### The Challenge

GMA lacked centralized visibility, creating operational blind spots across its cloud environments. The company needed consistent security controls across AWS workloads, cloud-hosted applications, and distributed endpoints, without relying on fragmented point solutions.

GMA required a security solution that offered security visibility for AWS-hosted workloads, integrated real-time threat intelligence, and delivered centralized monitoring and response capabilities that scale with cloud growth.

### The Outcome

To achieve security coverage across their entire infrastructure, GMA implemented Trellix endpoint, network, and threat intelligence solutions to build a cohesive security posture that eliminated previous gaps in protection.

The flexible deployment options enabled the customer to maintain security consistency while accommodating diverse infrastructure requirements. The combination of on-premises, AWS, hybrid, and other cloud deployments provided the adaptability needed to protect assets regardless of their location.

GMA now benefits from centralized security operations through Trellix Helix, which provides visibility and analytics across all deployed solutions, creating a more efficient and effective security operation.

#### Testimonial

**Trellix has delivered measurable value across our operations. We've achieved faster incident response, stronger visibility into security events, and improved operational efficiency. The platform has streamlined both deployment and daily operations, enabling our teams to operate more effectively and respond with greater speed and confidence.**

**Looking ahead, we plan to expand our use of Trellix solutions based on customer satisfaction and demand.**
