Introduction

This course provides an in-depth introduction to the tasks you can perform to manage a Trellix Application and Change Control (TACC) deployment. ENS provides dashboards, queries, reports, log files, and events to monitor your ENS deployment. Application and Change Control is made up of three components; Application Control, Change Control, and Integrity Monitor. Application Control uses dynamic allowlisting to make sure that only trusted applications run on devices, servers, and desktops. Change Control allows you to monitor and prevent changes to the file system, registry, and user accounts. Integrity Monitor provides real-time monitoring and identifies transient change violations. This course is designed as a practical starting point for someone who is new to supporting Application and Change Control.

Learning Objectives

After completing this course, learners should be able to:

- Use the Application and Change Control dashboards and reports.
- Perform basic system troubleshooting tasks.
- Use the Application and Change Control Command Line Interfaces to perform system tasks.
- Use recommended best practices with Application and Change Control.

Who Should Attend

This course is intended for system and network administrators, security personnel, auditors, and/or consultants concerned with system endpoint security.

Course Outline

1. Course Introduction
2. Dashboards and Reporting
3. Troubleshooting
4. CLI Administration and Recommended Practices
5. Course Summary
6. Course Exam
