

# Trellix® Data Loss Prevention Endpoint Complete

## Highlights

### Stop Data Leakage

- Protect endpoints from accidental and intentional sensitive data leaks.

### Demonstrate Compliance

- Apply out-of-the-box policies aligned to common compliance frameworks; report, audit, and conduct forensics as needed.

### Educate Users

- Monitor and/or block users who attempt to violate data-sharing policies with customizable pop-up notifications and justification requests.

### Centralize Management

- Deploy, administer policies, and produce reporting for Windows and macOS endpoints in a single console available on-premises or via SaaS.

## Stop Data Exfiltration From Endpoints

Workstations and laptops are among the most vulnerable points in an organization's technology infrastructure. From accidental errors to malicious attacks, if sensitive and proprietary data is compromised the impact on an enterprise can be devastating. Trellix Data Loss Prevention Endpoint Complete enables organizations to monitor and block unsanctioned activities to prevent data leaks, as well as, prohibit risky user behavior such as introducing unauthorized devices to the network and visiting dangerous URLs on their Windows or macOS devices.

### Data Discovery and Classification

Find and classify data with standard rules (Personal Information, Personal Health Information, Payment Card Information, etc) and add custom rules for intellectual property. Discover data stored in files, folders, and on the device's drives.

### Real-time Monitoring and Event Detection

Protect sensitive data from unauthorized transfer, duplication, and printing, and get real-time reports on data events. Implement our API integration with your existing incident management tools to streamline event management or remediate events in a central console.

### Device Control

Block unauthorized devices from installing software or connecting with endpoints. Monitor and block risky content, plus filter unapproved URLs.

## Data Breaches Know the Numbers<sup>1</sup>

- 68% of breaches in 2023 included a human element
- 35% of breaches were the result of an insider threat
- 90% of malicious insiders were financially motivated
- One-third of data breaches compromised confidential information
- Personal information was the top category of information compromised in breaches where confidential information was leaked

## Browser Protection

Stop sensitive data loss over the most popular browsers — Chrome, Edge, Firefox, and Safari. Monitor or block file uploads, copy/paste into web pages, and print from web applications based on settings. Seamless API integration with Chrome Enterprise is also available.

## Email Protection

Protect sensitive information shared over email including monitoring/blocking message file attachments, monitoring of meta tags, options for file encryption, and blocking other risky activities over email.

## Optical Character Recognition (OCR)

Enhance data protection and extend visibility into non-text files with the OCR for Endpoint add-on. Efficiently discover and protect sensitive data by extracting text from images, PDFs, and scanned documents across a wide range of languages, reducing manual verification and potential for data exfiltration.

Trellix Data Loss Prevention Endpoint Complete is available individually or as part of our Data Security product suites.
