

# Trellix

## EMEA & LTAM Tech Summit 2026

19-23 October 2026 | Athens, Greece

### LTAM technical breakout sessions

Get ready for an exclusive, hands-on technical deep dive and networking event. Connect with Trellix experts and peers from across EMEA and LTAM as we explore **technical architecture, critical use cases like OT/IT, key differentiators, live demonstrations, and future plans** of Trellix solutions. Collaborate with fellow attendees, exchange insights, and build valuable connections during networking opportunities.

- **Trellix Security Operations: AI-powered autonomous SOC**

Empower your security operations center by breaking down silos. Discover how Trellix Hyperautomation transforms SOC operations. Learn how to automate workflows with user-friendly no-code tools, upskill less experienced analysts, and dramatically improve detection and response times with threat intelligence. Then, connect your laptop to our live labs to build and execute the use cases yourself. The session concludes with actionable insights into our roadmap, competitive differentiators along with a comprehensive Q&A.

- **Trellix NDR: AI-powered network detection, response and forensics**

In today's evasive threat landscape, standard network visibility is no longer enough. This session dives into the unique capabilities of Trellix NDR and how it transforms threat hunting. Discover how to leverage advanced network forensics to reconstruct full sessions and uncover critical evidence, allowing your team to pinpoint patient zero with precision. Then, connect your laptop to our live labs to experience these unique NDR capabilities firsthand. The session concludes with an exclusive look at our roadmap and competitive differentiators, followed by an open Q&A.

- **Trellix Email & Collaboration Security: AI-powered protection for the human perimeter**

Email and collaboration tools remain the primary targets for attackers, exploiting users as the weakest link in the security chain. This session explores why resilient collaboration security is critical to your business and introduces the advanced capabilities of the Trellix Phishing Simulator. Learn how to maintain strict control and continuous education to transform your users from a vulnerability into a human firewall. After diving into our infrastructure and deployment best practices, connect your laptop to our live labs to test collaboration security and simulation use cases in real time. The session concludes with a look at our competitive advantages, future roadmap, and an open Q&A.

- **Trellix EDRF: AI-powered endpoint detection, response and advanced forensics**

Traditional EDR can't keep up as adversaries evolve and integrate AI into their attacks. Join us to uncover the business need for next-generation endpoint security through Trellix EDRF. In this session, we'll dig into Trellix's unique forensic capabilities, which enables security teams to conduct thorough investigations and gather evidence that other solutions often miss. We will look under the hood at Trellix's endpoint architecture and share deployment best practices. Bring your laptop—you'll jump into our online labs to build and execute these advanced EDRF use cases live. We'll wrap up by discussing our roadmap, how our solution outpaces the competition, and open the floor for your technical and strategic questions.

- **Trellix Data Security: AI-powered data security and Shadow AI protection**

In today's decentralized world, Trellix delivers a unique value proposition: securing your data wherever it lives, without compromise. Discover the vital business need for modern data security as we walk through our comprehensive architecture and deployment best practices. This session highlights our advanced forensic search capabilities through full data capture for deep visibility into leaks, as well as our specialized module designed to manage data risk in emerging AI services (Shadow AI). During our live, hands-on lab, you will use your laptop to configure and test these unique data-protection use cases. We'll finish with a clear look at our roadmap, how we stack up against the competition, and open the floor for your questions.

- **Trellix Threat Intelligence: Predict and prioritize cyber attacks**

Reacting to cyber attacks after they happen is a losing battle. This session explores how Trellix Threat Intelligence helps you transition from reactive to proactive security, leveraging critical telemetry from hundreds of millions of global sensors. Discover how to predict and prioritize active threat campaigns using Trellix Insights, while drastically shrinking containment windows through the Threat Intelligence Exchange (TIE) to share intelligence across your entire security ecosystem in real time. During our live, hands-on lab, you will use your laptop to map adversary behaviors, track active campaigns, and execute intelligence-driven defense use cases. We'll finish with a clear look at our roadmap, how we stack up against the competition, and open the floor to your questions.

- **Consulting training: Proactive defense | Advanced threat hunting training**

Shift your security posture from reactive to proactive. Led by seasoned Trellix experts, this immersive consulting training focuses entirely on the methodology and mindset of effective threat hunting. Through guided, hands-on exercises, you will learn to navigate complex environments, uncover hidden adversary behaviors, and refine your advanced incident response capabilities. Bring your laptop and be prepared for a deep dive into real-world threat hunting.

- **Capture the flag (CTF): Beyond the flag | Translating CTF skills to real-world defense**

Put your skills to the ultimate test in our live capture the flag (CTF) event! This highly interactive session isn't just about scoring points and earning bragging rights; it's about translating complex hacking challenges into actionable, real-world defensive strategies. Compete against your peers, solve intricate security puzzles, and learn how to reverse-engineer attacker methodologies to better secure your own environments. Bring your laptop, bring your A-game, and may the best analyst win!

- **Trellix demo excellence team workstation: Ask the expert**

Maximize the impact of your technical engagements at the Demo Excellence Team Workstation. Throughout the summit, our subject matter experts will be stationed at this dedicated hub to assist with any questions regarding lab access and usage. Drop by between sessions to discuss best practices for leveraging our lab infrastructure to support your customer engagements seamlessly. This is also a collaborative space—we want to hear from you! Share your feedback and tell us which top use cases you would like to see developed next to help drive your business and elevate your future technical demonstrations.
