

SOLUTION BRIEF

# Digital Personal Data Protection Act Compliance

Build a cyber resilient foundation with Trellix®

India's Digital Personal Data Protection (DPDP) Act of 2023 and DPDP Rules 2025 require enterprises to align security, privacy, and governance capabilities across consent management, breach handling, data lifecycle controls, security safeguards, and rights fulfilment. Organizations must modernize both business processes and infrastructure to meet expectations around encryption, logging, monitoring, access controls, and automated privacy workflows. This brief outlines how Trellix solutions and services support key DPDP cybersecurity provisions with a broad compliance-enablement framework.

## Meeting DPDP safeguard requirements with Trellix solutions

Trellix solutions strongly support key cybersecurity components of DPDP compliance. They provide unified telemetry across IT, OT, cloud, and hybrid environments for comprehensive visibility into personal data flows. In addition, they deliver strong breach containment and investigation capabilities supported by integrated monitoring and Trellix Data Loss Prevention (DLP) controls. Regulatory exposure is reduced through evidence-based compliance readiness, and the scalable, modular Trellix architecture enables organizations to adapt to evolving DPDP regulations and sector-specific security requirements.

DPDP Safeguard Requirement	Trellix Solutions	Compliance Outcomes
Prevent unauthorized disclosure	Data Loss Prevention (DLP)	Blocks data exfiltration
Protect data at rest	Data Encryption	Secures lost/stolen devices
Monitor personal data access	Database Security	Tracks queries, privileged users
Enforce purpose limitation	DLP Policy Controls	Restricts unauthorized exports
Detect insider misuse	DLP & Data Security	Identifies abnormal data access
Protect processor data flows	DLP Monitoring	Visibility into third-party transfers
Maintain audit logs	Data Security & DLP logs	Regulatory defensibility
Breach prevention	Endpoint Security (EDR)	Stops malware & ransomware
Network-based data compromise	Network Security (IPS/NDR)	Detects anomalous traffic
Incident investigation	EDR Forensics, NDR	Log correlation & forensic investigation
Cloud data protection	Trellix IX & DLP	Protects SaaS & cloud storage
Email-based data leaks	Email Security-Cloud & DLP	Guards against phishing & data leakage
Centralized governance	ePolicy Orchestrator Central Manager, Helix	Unified policy & reporting
Risk-informed safeguards	Threat Intel Database Security	Threat-aware control tuning

## Accelerating compliance with Trellix Professional Services

Trellix Professional Services is uniquely positioned to support Indian businesses in navigating the complexities of data privacy compliance, thanks to our expertise in implementing digital business solutions and ensuring compliance with global privacy standards such as GDPR. Delivered through a consultative, governance-led approach, our programs provide frameworks, structured methodologies, SOPs, checklists, and assessment models for DPDP compliance. Where applicable, organizations can leverage their own existing systems and tools.

### Strategy and architecture programs

- Compliance Enablement Framework: A security- and privacy-led architecture to operationalize technical safeguards mandated under the DPDP Act.
- Data Protection Awareness: Consulting engagements evaluating current protection posture using proprietary, internally developed assessment tools.

### Operational governance programs

- Principal Consent Management: Transitioning organizations from fragmented consent capture to a defensible, auditable, and scalable consent governance framework.
- Principal Grievance Redressal: Structured advisory to identify gaps and deliver prioritized roadmaps for defensible grievance handling.

### Risk and assurance programs

- Protection Impact Assessment: Evidence-based gap analysis and remediation roadmaps aligned to regulatory and business objectives.
- Third-party Assessment: Proactive identification and remediation of vendor-related risks through structured, defensible evaluations.

## Achieve a unified DPDP compliance architecture

Trellix enables organizations to build a unified, security-anchored DPDP compliance program by combining data protection, infrastructure security, and automated privacy operations. This approach strengthens regulatory readiness, reduces breach risk, and improves governance maturity—all while creating a measurable, scalable compliance posture aligned with India's evolving data protection landscape.
