

SOLUTION BRIEF

Trellix Wise™ for Private Cloud

The core of your agentic SOC

Highlights

True, agentic execution: Trained on Trellix's decades of threat research and guided by your analysts' reasoning, Trellix Wise for Private Cloud turns thousands of alerts into a handful of high-confidence verdicts in minutes, not hours or days.

AI on your terms: Trellix Wise for Private Cloud is the core of an agentic SOC that deploys and operates fully inside your environment, including fully air-gapped networks.

Predictable costs, unlimited defense: Offered as a flat-fee subscription priced on the hardware you operate, Trellix Wise for Private Cloud investigates every alert and hunts around the clock without metering, surprise overages, or hard limits.

Armed with AI, today's attackers can launch attacks, adapt, and hide their true intentions at AI speed, easily outmatching old approaches and manual efforts to combat them. Without agentic defenses, a human-only SOC will never have the speed to keep up with modern attacks. Organizations must meet AI-fueled attacks with AI-armed response.

But until now, evolving to an agentic SOC has meant sacrificing data privacy and control. The agentic SOC tools and capabilities are almost entirely reliant on public cloud access to run AI reasoning. Using a tool built this way means your mission-critical security systems are sharing your most sensitive security data to the cloud. For highly regulated, security-conscious entities with strict restrictions on cloud usage and data protection, lack of control and data sovereignty is a non-starter. Then, there's affordability. The typical consumption model based on token usage introduces unpredictable costs as AI use increases, and forces teams to ration AI as budgets tighten.

Organizations therefore face a triad of interrelated challenges: the need for agentic speed, the lack of ownership and control in agentic systems to date, and unpredictable, burgeoning costs.

Machine-speed defense you can trust

Trellix Wise for Private Cloud is the core of an agentic SOC built on a single, flat-fee subscription that runs entirely on your hardware, so your data never needs to leave your walls. Around the clock, no alert or piece of threat intelligence goes unexamined, giving your team the support, speed, and confidence to make the decisions that matter and finally achieve the scale they've always needed.

Delivering action at AI speed without loss of control, Trellix Wise for Private Cloud addresses the three key needs for today's most security-conscious organizations:

See what customers are saying

"Trellix Wise for Private Cloud is transparent. We can figure out what we're doing right and then govern it."

—Healthcare Organization

The human-in-the-loop model of Trellix Wise for Private Cloud is absolutely incredible and seamless. Having intelligent, proactive recommendations for our next actions is a total game-changer that delivers extraordinary value."

—IT Services and Solutions Provider

"I can give this to my Tier 1 analysts."

—Financial Services Organization

Speed and efficacy to combat the modern era of AI-fueled attacks:

Trellix Wise for Private Cloud can investigate 100% of alerts the moment they hit, connecting the dots across low-level events and threat intelligence signals to surface the sophisticated attacks legacy tools miss. Every verdict arrives backed by concrete, auditable evidence so your team acts with confidence, not guesswork. With Trellix Wise for Private Cloud, you finally have the tool you need to turn the tide and shift your team to proactive, strategic defense.

Trust to command every decision with confidence: Trellix Wise for Private Cloud makes every determination transparent, showing what it observed and how sure it is, so you decide when it's good enough to continue and when more context is needed. Every verdict carries a calibrated confidence level, a fully auditable white-box case file traceable to real evidence, and reasoning grounded in your data and hardened against the drift that degrades AI over time. All of it stays on your infrastructure, so nothing sensitive is ever shared to the public cloud. With Trellix Wise for Private Cloud, the most regulated, security-forward teams finally get agentic defense on their terms.

Predictable costs to evolve your SOC, not your budget: Trellix Wise for Private Cloud delivers the output of a growing team without the linear cost of hiring or the unpredictability of usage-based consumption pricing. You set capacity and speed by choosing the hardware and run it as you want. It lifts the repetitive load that fuels burnout and elevates analysts above the mundane to tackle the big projects.

Speed, at scale, and on your terms

The era of AI-fueled threats demands a force multiplier your team can actually trust and afford. Trellix Wise for Private Cloud delivers the speed to investigate 100% of alerts and threat signals the moment they land and surface the sophisticated attacks legacy tools miss. It provides the sovereignty of a fully auditable, transparent system that runs entirely on your infrastructure, so nothing sensitive ever leaves your walls. And it offers the predictability of a single flat-fee subscription that lets you defend without metering, overages, or rationing.

You have the intelligence. Trellix Wise for Private Cloud gives you the wisdom at speed, at scale, and on your terms.
