MVISION Insights Essentials

Education Services eLearning course

Introduction

The MVISION Insights Essentials course from Education Services provides instruction on the design, setup, configuration, and management of this application. In addition, students will learn how to effectively leverage MVISION Insights in their environment.

The course is divided into lessons and a final exam.

Each lesson is a combination of instructional material such as texts, videos, audios, external links, knowledge checks, and interactive learning experiences.

To successfully complete this training, you need to take and pass the final course exam with a minimum score of 80%.
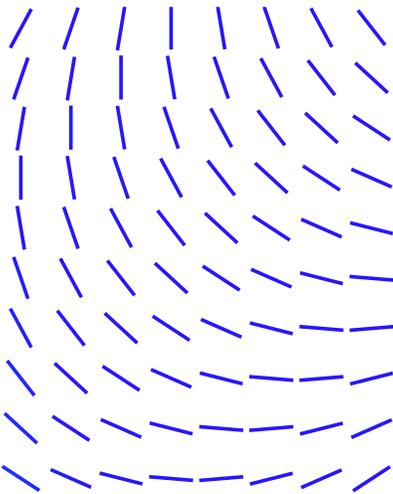

This course is three hours in length.

Recommended Pre-Work

This course is intended for customers who serve as analysts and/or engineers, responsible for configuration, management, and monitoring activity on their systems, networks, databases, and applications using the MVISION solution.

Audience

It is recommended that students have a working knowledge of Windows and system administration and network technologies, computer security, cloud security concepts, and web technologies.

It is also necessary to have prior experience using MVISION ePO, ePO, and Endpoint Security software.

Course Goals

Upon completion of this training, you will be able to:

- Identify MVISION Insights capabilities.

- Define MVISION Insights components

- Distinguish how MVISION Insights helps the security operations center (SOC) mission.

- Describe the product/solution architecture.

- Identify product/solution communication paths and ports.

- Configure users onboarding settings.

- Check in the required product extension(s).

- Recall MVISION Insights dashboards and their purposes.

- Collect HAR files for troubleshooting purposes.
